

IGGESUND PRODUCTS

The Blue Line product line is the result of more than 30 years of developing, testing and manufacturing blades for the professional timber industry.

These blades are the strongest ever, with a unique alloy that, together with hardening technology, makes them stronger, more durable and more rigid to withstand all types of work!

The nose sprocket has 12 teeth and a large diameter, which reduces speed and therefore also friction and wear.

We supply various drive sprockets. Special molding technology provides perfect shape and balance at high speeds.

The drive sprocket also has high wear resistance thanks to optimally hardened steel.

The materials used in the chain gives extra hardness, wear resistance and service life.
